

Lepikon AquaFresh water treadmill pools

Suitable for

- training
- recovery from high intensity training
- care and rehabilitation
- the prevention of injuries

Lepikon Oy

Lepikon Oy produces water treadmills for horses at Kuohu, a town located near Jyväskylä. The pools are made of high-quality materials and with Finnish professional quality.

Lepikon AquaFresh water treadmill is a training tool with multiple possibilities for horse training and personal care. Health and the prevention of injuries is the key to success. This is also known by **Antero Tupamäki** who is one of Europe's most appreciated veterinarians.

- *Concerning training, the most significant advantage comes from the wellbeing of muscles. AquaFresh water treadmill training strengthens specific muscle groups in a completely different way than ordinary trot or walk training. AquaFresh training has especially positive impacts on the flexors of the hock, extensors of the stifle, the lifter muscles of the shoulders and knees.*
- *Water treadmills are used especially in the treatment of injuries in the lower limbs, suspensory ligament and tendon injuries in athletic horses, tendon sheath swelling and in the treatment of other similar issues. AquaFresh training is also beneficial in the recovery of bone injuries. Water training gives a great option for horses with long pastern bone cracks to start training quick after they have recovered enough to walk normally. In general, it can be said that water training is beneficial in the treatment and rehabilitation of orthopedic lower limb injuries.*

Technique:

- stainless steel construction
- the system is controlled by a high-quality Siemens programme
- waterproof touch screen
- muted walking surface + hydraulic functions of the belt = quiet sound
- durable fibers and gauze in the belt. Easy to change.
- rough material collector + 400 kg sand filter for water purification. Automatic flushing system and particle control.
- quick/effective to empty and refill (25m³/h)
- stepless water level variation 0-800mm
- horse-friendly water purification. Hydrogen peroxide-disinfection of water, automatic sanity control. Note! We don't use chlorinated disinfectants to avoid mucosal and respiratory irritation.
- guaranteed cooling system (OPTIO), warmed water exits automatically and new, cold, water is drawn into the system as replacement
- front side elevation 0-5 degrees giving the possibility for uphill training
- portable speeds from 0 to 15 km/h
- safety control by light beam system + emergency stop buttons on both sides
- easy-selected training programs, unlimited possibilities to preset functional values
- simple procedures to keep the system safe and functional
- operating units can be located in a separate room which saves space and noise is reduced

The only requirement for installation is access to a water faucet and an existing electricity and plumbing connection. The installation can be done on floor surface or by embedding.

Lepikon AquaFresh

- high-quality materials
- made by Finnish professional quality
- profitable
- easy to use
- easy and quick to maintain (changing the belt)
- replacement parts quickly accessible
